Task 1:-

Fixed LOD Expression

FIXED level of detail expressions compute a value using the specified dimensions, without reference to the dimensions in the view.

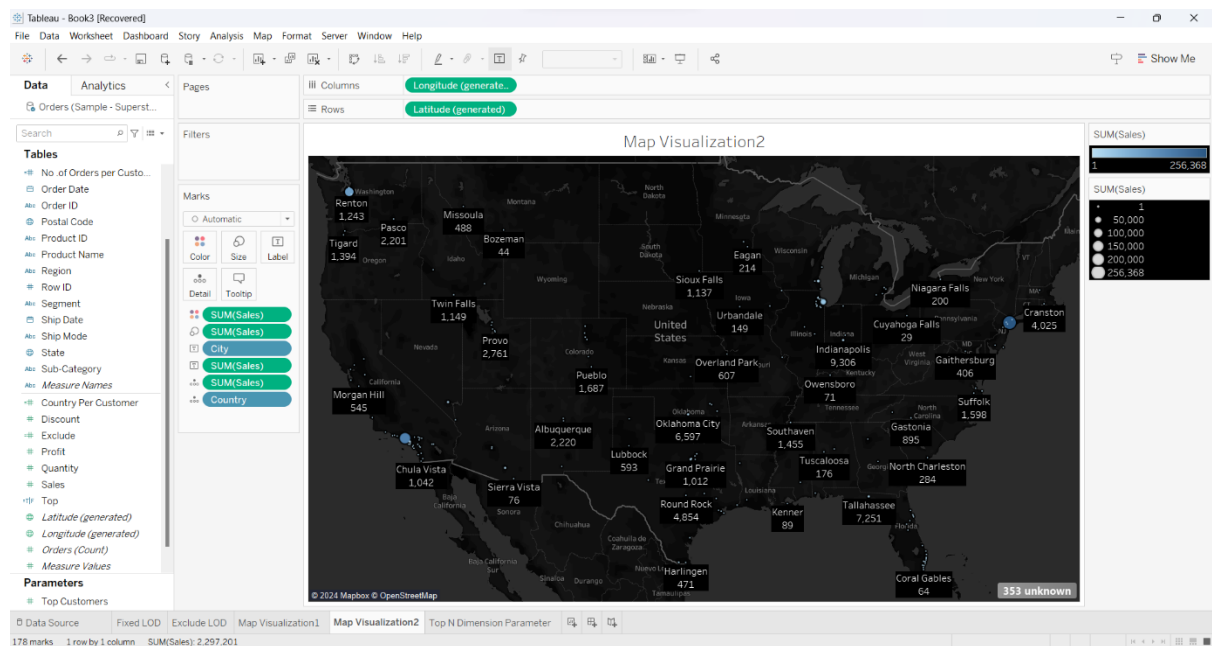

Exclude LOD Expression

EXCLUDE LOD expressions work by excluding a specific dimension or set of dimensions from the calculation. While still considering the other dimensions present in the view. These expressions are helpful when you want to calculate values without the influence of certain dimensions.

Task 2:-

Map Visualization 1

Map visualization in Tableau is a powerful tool for displaying geographic data effectively. Tableau's map visualization features allow you to create interactive and visually appealing maps with a click of a button.

Map Visualization 2

Task 3:-

Top N Parameters

Tableau's Top N parameter is a filter that shows the highest n number of rows or values in a view.
